

CashCode BNL

NOTE BULK NOTE LOADER

NOTE BULK NOTE LOADER

CashCode BNL

Description

The CashCode Bulk Note Loader (BNL) does more than just accept a bundle of bills at a time. It uses advanced note validating technology with the added benefit of increasing productivity by accepting up to 45 bills* at once. BNL contains high-tech features in its validating head and is the fastest way to validate and stack bills in your banking or redemption kiosk application.

Additionally, OEMs such as drop safe manufactures have incorporated the BNL as a stand-alone device working with various custom cash collection devices such as large capacity vaults and/or cash bags.

***varies by country**

Benefits

Efficient and convenient. Fixed-width loader offers a transaction speed of less than 1 second per bill

Flexible in design. Used as a stackerless, stand-alone banknote validator or paired with the 3000-note cashbox for high volume applications

Load it up. Customers place stack of banknotes in the loader at one time instead of feeding them individually for a quicker and smoother customer service

Improve profitability. Secondary path is utilized for suspect banknotes—forcing removal before feeding-in continues with only valid notes
