NOTE RECYCLER

mei®

VNR

Description

The MEI® VNR banknote recycler manages larger bills for your business. By enabling acceptance of higher denomination notes and the payback of notes as change, operators have found more ATM \$20s in their cashboxes and up to a 35% sales lift through recycling alone.

Banknote replenishing technology takes notes coming in for payment, stores them on an internal drum inside the device, and returns them as change to consumers as needed. Achieve higher sales per customer by accepting larger note denominations, without worrying about not having the correct change.

Benefits

Better Acceptance. Validates \$20s, \$10s, \$5s and \$1s with the ability to recycle a single denomination, so customers aren't limited to receiving coins as change

Modular design. Makes it easy for operators to add the VNR recycler module to a VN2700 bill validator at any time

Smart diagnostics. Two-character display allow drivers to troubleshoot, upgrade, and program so you can manage your routes with ease

Easy route management. Programmable recycler module holds up to 30 bills at a time, reducing service costs

High-visibility bezel option. Strobes through a wide range of colors and enables/disables its denomination lights in real-time

Specifications

Note validation

- 67mm Width 156mm Length

Interfaces Supported

- MDB

Denominations Recycled

- One

Operating Temperature

- -15°C to 60°C

Firmware Updates

- BPM, STS (MDB)

Compliance

- UL

Operating Voltage (V)

- 22 V DC - 45 V DC

Bezels

- VFM Upstacker, Compact Upstacker, 4-in-1 Plus, High Visibility Bezel (VFM), High visibility (Compact), 3 in1, eChoice
